

Andrey Grigoryev

Unity Developer — gameplay and core systems

Open to remote work, worldwide · Saint Petersburg, Russia · and.grigoryev2017@gmail.com · +7 985 985 63 58 · linkedin.com/in/andrey-grigoryev-541a34372 · github.com/broshkin · broshkin.github.io

SUMMARY

Game developer, five years with Unity and C#. I run my own projects and small teams: on Figure Spider I set the architecture, split the work and wrote most of the code. I build Unity games for the browser — some of them were released on Yandex Games — which is where the habit comes from of profiling and optimising WebGL builds so they hold up on weak devices. I started out in competitive programming, and it shows in what I enjoy: the parts of a game that turn out to be a real algorithm rather than engine glue. Three years teaching Unity and C#: 100+ students and a curriculum of my own. Winner or prize winner of four national olympiads, including the National Technology Olympiad in the Game Development track. I have worked remotely with a studio in the US — a distributed team and a time-zone gap are the normal case for me.

TECHNICAL SKILLS

CORE	C#, Unity, OOP, SOLID, design patterns, game architecture, performance profiling, code review, mentoring
UNITY STACK	WebGL, Zenject (DI), UniTask, DOTween, Unity Profiler, YandexGames SDK, PC, mobile and VR builds
TOOLING	Git, GitHub Actions (CI/CD), Docker, Visual Studio
ALSO	C++, GLSL, ShaderLab, Python, Unreal Engine 5, Lua

EXPERIENCE

Independent game development · Unity developer, team lead Feb 2026 - present
Saint Petersburg, Russia

- Led a team of four on **Figure Spider** (Unity), a puzzle game built over three months: set the architecture, split the work and wrote most of the code, including the segment intersection graph that drives figure detection.
- Shipped the build publicly on itch.io; showcased at ITMO GameDay and voted among the best games of the showcase by the audience.
- Build Unity/WebGL projects for the browser: profiling, draw-call batching, per-frame allocations, and a stable frame rate on low-end and mid-range hardware.

TOP Computer Academy · Unity3D instructor Feb 2023 - Jun 2026
Saint Petersburg, Russia · part-time, alongside development

- Taught Unity and C# game development to 100+ students over three years: teenagers and career changers alike.
- Wrote the curriculum and the practical assignments covering C#, OOP and design patterns; mentored students through their own projects, from concept to a playable build.

Basket Entertainment · Roblox / Lua developer Dec 2024 - May 2025
San Francisco, USA · remote, part-time

- Implemented gameplay mechanics and monetisation systems in Lua for a project on the Roblox platform.
- Worked in a distributed team across time zones, with written communication and code review as the default.

SELECTED PROJECTS

- **Released on Yandex Games** — some of my Unity/WebGL projects shipped on the platform, Drift Escape among them.
- **Figure Spider** · Unity, Windows build. A puzzle game built by a team of four under my lead; figure detection runs on a segment intersection graph. Showcased at ITMO GameDay and voted among the best games of the showcase. veighteen.itch.io/figurespider
- **Berloga: Destroy(evil)** · Unity, PC. A story-driven 2.5D puzzle game where you give machines sequences of commands. 7th place nationally at the National Technology Olympiad, Game Development track, 2023/24.

- **Let's learn physics!** · Unity, PC and VR (Oculus Quest 2). A story-driven educational physics game. Winner, "Engineers of the Future" research conference.
- More — Cookie Carnage (Unity, a shooter built in 24 hours at a jam), Yummy Universe and Monopoly Defense (Unreal Engine 5) — at itch.io/profile/andxrey and github.com/broshkin.

OLYMPIADS AND AWARDS

- National Technology Olympiad (NTO), Game Development track. Prize winner, 2024. Russia's national engineering olympiad; the track covers game design and implementation end to end.
- Moscow Pre-Professional Olympiad. Winner, 1st degree, 2023.
- Moscow Olympiad in Informatics. Prize winner, 2023.
- "Step into the Future", national research and engineering competition. Prize winner, 2023.

COMMUNITY

- Public talks on game development: "Roadmap of a game developer" and "When will NPCs start seeking revenge?" on AI in games.
- Board game Losers' Agency, designed and playtested. Showcased at ITMO GameDevDay.

EDUCATION

ITMO University

BSc, Game Development Technologies · 2024 - 2028
Saint Petersburg, Russia

LANGUAGES

Russian — native

English — Upper-Intermediate (B2). Daily use in an international team: written communication, technical documentation, code review.
